

CONSENT FOR USE OF DATA

Because the audio recordings will contain information that can potentially be used to identify your child and those around them, we need your permission in order to share that data with other individuals. Sharing the data reduces the privacy of the people in the recordings but increases the chances of the public benefitting from the information the recordings provide. Wherever possible we will use randomly generated numbers to identify you and your child rather than your names. However, the audio and video recordings themselves will contain information that could potentially be used to identify you or your child, such as your voices, images, and names. The identifiable information that you choose not to share will be analyzed by our research team but otherwise will be kept confidential to the full extent permitted by law.

Please check one (and only one) of the three boxes below to indicate your choice.

- The recordings and questionnaire information about my child may be included in a password-protected database for use by researchers at other institutions who have completed ethical training for working with this type of private and confidential data and have agreed not to share it with other groups.
- The recordings and questionnaire information about my child may be included in a password-protected database for use by researchers at other institutions who have completed ethical training for working with this type of private and confidential data and have agreed not to share it with other groups. In addition, the recordings and questionnaire information about my child may be shared with the general public. (Last names will be removed and episodes judged to be particularly private will be removed by the researchers before sharing with the general public, though they will not be removed before sharing in the password-protected database.)
- I prefer for my recordings and questionnaire information NOT to be shared in either of the above ways.
